Body Repair Kit

BODY REPAIR KIT

▶ The most complete body repair kit due to the number and variety of accessories.

▶ **Important advantage:** safer and more sturdy thanks to the threaded connections which allow pulling operations, compared with other more extensive but less reliable connection systems in the market which only allow pushing operations.

▶ Indispensable for jobs such as body repairs, rescue and roadside service or any other pushing, putting, spreading or lifting applications that require hydraulic force.

IMPORTANT: As the cylinders have a greater capacity than the components, namely chains, cylinder toes, tube extensions, etc., they should never exceed half their rated capacity.

The maximum capacity of the SH-1 spreading cylinder is 1t.
Maximum working load of the chain: 1t.

Safety overload vavle.

Hydraulic stroke limitation.

Piston retracts by spring.

BR10

MADE IN SPAIN

Pulling cylinder.
Optional.
